

## Letter of Guarantee

We, Innoen® Technologies Ltd, with head office in Mississauga, Ontario, Canada, certify as below:

Innoen®'s patented **Airflow UV Quarantine® System** is globally the top one system to deal with the COVID-19 airborne infection, bar none. Designed and manufactured from this system, Innoen®'s patented **COVID-19 Airborne Infection UV Quarantine® Devices** are the most advanced medical devices to target COVID-19 airborne infection, bar none, with the public common name as **UV mask®**. These devices are classified by Health Canada as Class II Medical Devices designated with ID 319987HA#, HC#, indiscriminately wearing by both healthy and SAR-VOR-2 virus-infected people without any nucleic acid pre-screening. Regardless of age, gender, previous infected condition, etc., also, no need to consider how many SAR-VOR-2 virus-heavily infected persons nearby or even hug the healthy people in a public region, no considering of social distancing (even as close as to 20cm to all heavily infected people), no matter how much infected human respiratory air accumulation in a public region, no considering of immunosenescence, no considering of saturation secondary infection accumulation on a device or in a public region, no considering where the viruses come from or where they will go, no considering the nucleic test, never considering various intentional “scientific stories”; anyone healthy person uses a device properly can be guaranteed for a 99.9999 % successful rate to stop COVID-19 spreading under a higher than 50% **placebo group infection rate** environmental background. This infection stopping rate is the top one in the world, best than any ever-known available solutions, bar none. Most importantly, these medical devices are totally free of any side-effects or age correlation factor to human bodies, truly safe for use if handled properly.

There is a UV germicidal lamp (319987UVD#) on each unit of Innoen®'s patented **UV mask®** (319987HA#, 319987HC#), it can issue UVC 253.7 nm radiation with strength over 3000  $\mu\text{W}/\text{cm}^2$  to all the human respiratory air pass through the device. Our highest record reaches 4500 $\mu\text{W}/\text{cm}^2$  for each unit of UVC on-device germicidal lamp (319987UVH#), this is the top one record in the world which is achieved from the combination of various technologies. This high-quality UVC radiation can eradicate high concentration SAR-VOR-2 viruses in the human respiratory air in 1 cm radii of the UV lamp within 0.1 seconds, totally stop the airborne infection. However, these devices specifically deal with airborne infection, please avoid some potential none-airborne COVID-19 infection pathways such as blood transferring and body liquid exchanging, etc., while using the device. Our devices are not proper for such kinds of non-airborne infections.

Innoen®'s patented **UV mask®**, not only effectively stop COVID-19 from spreading but also equivalently stronger to eradicate other known airborne infectious diseases, from the most aggressive infectious disease such as COVID-19 to routine common flu.

We are supplying top products to global customers, along with high-quality product identification, traceability, customer care, and product-service system. We strictly follow all national & regional laws, comply with all medical regulations, to provide the highest level of epidemic prevention products we can strive to the global public for them to choose voluntarily!

This policy, product specification, and service quality will be reviewed and revised if necessary, annually to keep up to date. We welcome interested entities and global public comment on the enforcement of the policy and providing products and services.
